

# FACIAL BONE AND SOFT TISSUE TUMORS PROGRAM

For children with tumors of the head or face, whether on the surface, in the mouth, around the teeth or deeper in the bone, the Facial Bone and Soft Tissue Tumors Program at Children's Hospital of Philadelphia (CHOP) has a world-class team to guide families who are seeking the best possible care.

## EXPERT CARE FOR PEDIATRIC PATIENTS

From making a diagnosis to providing unsurpassed care, our multidisciplinary team creates comprehensive, individualized treatment plans for each child. Our team is specially trained in treating children who are still growing. Team members include plastic surgeons, oral and maxillofacial surgeons, orthodontists, advanced practice providers, nurse navigators, and psychosocial support professionals.

### Treatment options can include:

Surgery to remove the tumor | Reconstruction/rebuilding of tissues | Replacement of teeth | Care from CHOP oncologists

## WORLD-CLASS SURGEONS

Performing surgery on children and adolescents with visible differences requires specialized knowledge. When a child needs surgery on the face, jaw or mouth, experts at CHOP's Division of Plastic, Reconstructive and Oral Surgery have extensive experience with every type of condition, from the common to the complex.

## CARING FOR THE WHOLE CHILD

Having an appearance difference that is congenital or acquired can present a variety of challenges for children and their families. Our dedicated clinical psychologists and social worker help children navigate these challenges and maximize each child's well-being at home, at school and in the community. These professionals work with children, adolescents and their families to address psychosocial concerns before and after surgery and throughout the entire treatment process.

## PARTNER WITH US

To care for pediatric patients, our team partners with:

- Pediatricians
- Orthodontists
- Dentists
- Neurologists
- And more!
