Center for Lymphatic  
Imaging & Interventions

# PARTNERING WITH YOU TO PROVIDE THE LATEST BREAKTHROUGHS

The Center for Lymphatic Imaging and Interventions at Children's Hospital of Philadelphia provides state-of-the-art care for children and adults with lymphatic leaks and lymphatic flow disorders. Our first-of-its-kind center specializes in treating complex and difficult-to-manage conditions such as plastic bronchitis, protein-losing enteropathy and chylothorax.

Led by Yoav Dori, MD, PhD, our team has developed new diagnostic tools such as dynamic-contrast MR lymphangiography, advanced therapies including intranodal lymphangiography-guided lymphatic interventions, and a variety of minimally invasive treatments.

We focus on advancing care and conducting groundbreaking research that will create a better future for patients with lymphatic flow disorders. Our breakthroughs are continuing to shape this exciting field of medicine.
